

Veneer crossfeed splicing

crossmaster
|

Operator console

All specific machine settings are within the field of vision of the operator. All important functions are accessed by the touch screen. There is also a special menu for troubleshooting.

Pre-feeding device

To get a higher performance the veneer strips are placed on transport belts and forwarded to the heating section. After automatic positioning the gluing cycle is carried out.

Veneer clipper

After splicing of the veneer it is then possible to cut the sheets to preselected sizes.

Fully glued veneer joints for highest demands. Veneer-Crossfeed-splicing line in modular execution.

Made-up of:
Crossmaster basic machine including pre-feeding device and clipper, interim conveyor, taping-trimming device and automatic stacker.

Stacking system

After splicing the veneer sheets are forwarded to the processing units and then conveyed to the stacking table.

Taping and trimming device

To avoid edge splitting on the veneer sheet, a self adhesive tape is applied. Directly after application of the tape, the edges are trimmed to size.

Basic machine with standard outfeed table

Crossfeed splicer at Interforest (Danzer Group) Durham, Canada

Crossmaster with immediate stacking system

Crossfeed splicer at Fuprin, Swedwood Group (IKEA), Germany

Modular system Crossmaster

Crossfeed splicer at Grillo Legno S. P. A., Italy

Master Serie – Single solution or modular production line

cutmaster

Veneer double knife guillotine

gluemaster

Veneer glue application machine
