

Veneer crossfeed splicing

crossmaster  
|

### **Operator console**

All specific machine settings are within the field of vision of the operator. All important functions are accessed by the touch screen. There is also a special menu for troubleshooting.

### **Pre-feeding device**

To get a higher performance the veneer strips are placed on transport belts and forwarded to the heating section. After automatic positioning the gluing cycle is carried out.

**Fully glued veneer joints for highest demands.  
Veneer-Crossfeed-splicing line in modular execution.**

**Made-up of:  
Crossmaster basic machine including pre-feeding device and clipper, interim conveyor, tapping-trimming device and automatic stacker.**

### **Stacking system**

After splicing the veneer sheets are forwarded to the processing units and then conveyed to the stacking table.

### Veneer clipper

After splicing of the veneer it is then possible to cut the sheets to preselected sizes.

### Taping and trimming device

To avoid edge splitting on the veneer sheet, a self adhesive tape is applied. Directly after application of the tape, the edges are trimmed to size.

**Basic machine with standard outfeed table**

**Crossmaster with immediate stacking system**

**Modular system Crossmaster**

**Crossfeed splicer at Interforest (Danzer Group) Durham, Canada**

**Crossfeed splicer at Fuprin, Swedwood Group (IKEA), Germany**

**Crossfeed splicer at Grillo Legno S. P. A., Italy**
